

Calculating Potential energy of a system of water

Molecules

The potential found are:

The Electrostatic Potential is equal to : -10318.861222477042 kcal/mol

The Vanderwaal's Potential is equal to : 1199.526277593358 kcal/mol

The Total potential is equal to : -9119.334944883685 kcal/mol
